Project Overview

Duration: 1 Week
Due Date: April 20th, 2022

Auto Mart is an online marketplace for automobiles, with Auto Mart users posting their cars for sale.

You are required to create an application, FE, and BE for this project. Create the FE design, work on the API also ensure they are integrated within the specified timeframe

APIs:
- Users can post a car sale advertisement
- Users can view a specific car
- Users can delete posts.

NB:
- *You are to create a pull request for each feature in the challenge and then merge it into your develop branch.*
- *Use any CSS framework e.g Bootstrap, Materialize, sass/scss.*
- *JavaScript frontend framework (React).*
- *Do not download or use an already built website template*
- *You can either use temporary storage as DB or MongoDB*
- *You should host your application on Netlify/Heroku or any other host you are familiar with*

Submission should be on/before the due date. Please send your GitHub repo link, with the application URL when you are done with the project
